- p. 20-21 **Figure S6:** Probability of treatment success varying the threshold that defines treatment success, *response* (or percent improvement), at KPC (a) and KPW (b)

Supplementary Materials, Tables

Table S1: Description of treatment episodes follow-up (14-180 days after treatment initiation)

	All (n=5,554)	KPC (n=2,559)	KPW (n=2,995)
# visits, total	24,189	10,305	13,884
Median # (IQR ¹) visits	3 (2, 6)	3 (1, 5)	3 (2, 6)
Median # (IQR) PHQ-9 scores ²	2 (1, 5)	2 (1, 4)	3 (1, 5)
# (%) of visits with PHQ-9	19,048 (79%)	7,608 (74%)	11,440 (82%)
Median (IQR) days since baseline of final visit	104 (49, 154)	87 (41, 147)	118 (58, 160)
Median (IQR) days since baseline of final PHQ-9	93 (42, 148)	81 (36, 141)	104 (49, 154)
Mean (sd ³) best PHQ-9 score	9.6 (5.9)	9.4 (6.0)	9.7 (5.9)
Mean (sd) final PHQ-9 score	11.0 (6.4)	10.8 (6.40)	11.3 (6.4)
# (%) best = final PHQ-9 score	3,703 (67%)	1,812 (71%)	1,891 (63%)

¹IQR: Interquartile range

²Some encounters had more than 1 PHQ-9 observations

³sd: standard deviation

Table S2(a-l): Cross-tabulation of depression treatment outcome measures

Table S2(a): KPC Response vs. Remission

	No remission			Remission			Total
