#### S1: Framework to Advance General Health Integration in Behavioral Health Settings

| Key Don  | nains of  |   | Integration   | Continuum  |  |   |
|--|---|---|---|--|--|---|
| Integrat   |   | Preliminary —   | Intermediate I  | Intermediate II  | Advanced —   | + |
| 1.<br>Screening;<br>Referral to<br>Care and<br>Follow-Up<br>(f/u)    | 1.1.Screening<br>and f/u for<br>preventive<br>and general<br>medical<br>conditions <sup>2</sup><br>(GMC)    | Response to patient self-report of general health complaints and/or chronic illness with f/u only when prompted.  | Systematic screening for basic <sup>3</sup> general health risk factors and proactive health education to support motivation to address risk factors.                                   | Systematic, screening and tracking of basic and relevant targeted general health risk factors as well as routine f/u for GMC with the availability of in-person or telehealth primary care.  | Analysis of patient population to stratify by severity of medical complexity and/or high cost utilization for proactive assessment tracking with in-person or telehealth primary care.   | > |
|  | 1.2<br>Facilitation<br>of referrals<br>and f/u  | Referral to external primary care provider(s) (PCP) and no/limited f/u.   | Formal collaborative agreement with external primary care practice to facilitate referral that includes engagement and communication expectations between behavioral health and PCP.    | Referral to onsite, co-located PCP or availability of primary care telehealth appointments with assurance of "warm hand-offs" when needed.   | Enhanced referral facilitation<br>to onsite or closely integrated<br>offsite PCPs, with automated<br>data sharing and accountability<br>for engagement.  | > |
| 2.<br>Evidence-<br>based (EB)<br>care for<br>preventive<br>interven- | 2.1 EB<br>guidelines or<br>treatment<br>protocols for<br>preventive<br>interventions                        | Not used or minimal guidelines<br>or protocols used for basic general<br>health risk factor screenings care.<br>No/minimal training for behavioral<br>health (BH) providers on preventive<br>screening frequency and results. | Routine use of EB guidelines to engage patients on basic general health risk factor screenings with limited training for BH providers on screening frequency and result interpretation. | Routine use of EB guidelines for basic and targeted preventive screenings with use of standard workflows for f/u on positive results. BH staff routinely trained on screening frequency and result interpretation.   | Systematic tracking and reminder system (embedded in EHR) used to assess need for preventive screenings, workflows for f/u availability of EB and outcomes driven programs to reduce or mitigate general health risk factors (smoking, alcohol, overweight, etc.).                     | > |
| tions and<br>common<br>general<br>medical<br>conditions              | 2.2 EB<br>guidelines<br>or<br>treatment<br>protocols<br>for GMC   | Not used or with minimal guidelines or EB workflows for improving access to care for GMC.   | Intermittent use of guidelines<br>and/or EB workflows of GMC<br>with limited monitoring activities.<br>BH staff and providers receive<br>limited training on GMC.                       | BH providers and/or embedded <sup>5</sup> PCP routine use of EB guidelines or workflows for patients with GMC, including monitorin treatment measures and linkage/navigation to medical services when appropriate. BH staff receives routine training in basics of common GMC. | point of service guidance on   | > |
|  | 2.3 Use of<br>medications<br>by BH<br>prescribers for<br>preventive<br>and general<br>medical<br>conditions | None or very limited use of non-psychiatric medications by BH prescribers. Non-psychiatric medication concerns are primarily referred to primary care clinicians to manage.   | BH prescriber routinely prescribes nicotine replacement therapy (NRT) or other psychiatric medications for smoking reduction.   | BH prescriber routinely prescribes smoking cessation and may occasionally make minor adjustments to medications for GMC when indicated, keeping PCP informed when doing so.  | BH prescriber can prescribe NRT<br>as well as prescribe general<br>medical medications with<br>assistance and consultation of<br>PCP.  | > |
|  | 2.4<br>Trauma-<br>informed<br>care  | Behavioral health staff<br>have no or minimal<br>awareness of effects of<br>trauma on integrated<br>health care.  | on trauma and impact on behavioral health and general health care.  on trauma and impact includ risk of of valid for train  | treatment at all level ing strategies for managing re-traumatizing. Limited use dated screening measures uma when indicated.   | of trauma-informed care strategies,<br>t and protocols by BH clinic for staff<br>is to promote resilience and address<br>stizing and de-escalation procedures.<br>se of validated trauma assessment tools<br>diverse childhood experiences (ACES)<br>checklist (PCL-C) when indicated. | > |
| 1 Individuals so   | reened must rec   | eive follow up by a trained BH provider or PCP (exter   | rnal or co-located). For the purpose of the framewor  | k, primary care provider includes M.D., D.O., PA and N   | P.   |   |

<sup>2</sup> Common general medical conditions include diabetes, hypertension, hyperlipidemia, coronary artery disease, asthma, arthritis, gastrointestinal disease, tooth and gum disease.

<sup>3</sup> Basic general health risk factor screenings might include: visit with a PCP (defined as self-report of a usual source other than ED care with presence of one or more documented primary care visit during the past year), depression, alcohol and substance use (including opioid use), blood pressure measurement, HIV, overweight/obesity, tobacco use and age appropriate screenings for cervical and colorectal cancer.

<sup>4</sup> Targeted general health risk factor screenings might include: intimate partner violence, HbALc, cholesterol, STI, hepatitis B, hepatitis C, tuberculosis and age appropriate screenings for immunizations, mammogram and osteoporosis. 5 Embedded and co-located arrangements include PCPs available through telehealth services

| Key Domains of  |  | Integration Continuum   |   |  |  |    |  |  |
|---|--|---|---|--|--|----|--|--|
| Integrated Care   |  |   | → Intermediate I  | Intermediate II  | Advanced —   | +  |  |  |
| 3. Ongoing<br>Care<br>Manage-<br>ment   | 3.1<br>Longitudinal<br>clinical<br>monitoring &<br>engagement<br>for preventive<br>health<br>and/orGMC   | None or minimal f/u of patients referred to primary and medical specialty care.   | Some ability to perform f/u of general health appointments, encourage medication adherence and navigation to appointments.  | Routine proactive follow-up<br>and tracking of patient medical<br>outcomes and availability of<br>coaching (in person or using<br>technology application) to ensure<br>engagement and early response.  | Use of tracking tool (e.g., excel tracker or disease registry software) to monitor treatment response and outcomes over time at individual and group level, coaching and proactive f/u with appointment reminders.   | >  |  |  |
| 4. Self-<br>manage-<br>ment<br>support<br>that is<br>adapted to<br>culture,<br>socio-<br>economic<br>and life<br>experiences<br>of patients | 4.1 Use of<br>tools to<br>promote<br>patient<br>activation &<br>recovery with<br>adaptations<br>for literacy,<br>economic<br>status,<br>language,<br>cultural<br>norms | None or minimal patient education on general medical conditions and basic general health risk factor screening recommendations. | Some availability of patient education on basic general health risk factor screening recommendations, including materials/handouts/web-based resources, with limited focus on self-management goal-setting. | Routine brief patient education delivered in person or technology application, on basic and targeted preventive screening recommendations and GMC. Treatment plans include diet and exercise, with routine use of self- management goal-setting. | Routine patient education with practical strategies for patient activation and healthy lifestyle habits (exercise & healthy eating) delivered using group education, peer support, technology application and/or on-site or community-based exercise programs. Self-management goals outlined in treatment plans. Advanced directives discussed and documented when appropriate. | -> |  |  |
| 5. Multi-<br>disciplinary<br>team<br>(including<br>patients)<br>with  | 5.1 Care<br>Team   | BH provider(s), patient, family caregiver <sup>6</sup> (if appropriate).  | BH provider(s), patient, nurse, family caregiver.   | BH provider(s), patient, nurse, peer, co-located PCP(s)) (M.D., D.O., PA, NP), family caregiver.   | BH provider(s), patient, nurse,<br>peer, PCP(s), care manager<br>focused on general health<br>integration, family caregiver.   | -  |  |  |
| dedicated<br>time to<br>provide<br>general<br>health care   | 5.2 Sharing<br>of treatment<br>information,<br>case review,<br>care plans<br>and<br>feedback   | No or minimal sharing of treatment information and feedback between BH and external PCP.  | Exchange of information (phone, fax) and routine consult retrieval from external PCP on changes of general health status, without regular chart documentation.  | Discussion of assessment and treatment plans in-person, virtual platform or by telephone when necessary and routine medical and behavioral health notes visible for routine reviews.   | Regular in-person, phone, virtual or e-mail meetings to discuss complex cases and routine electronic sharing of information and care plans supported by an organizational culture of open communication channels.  | >  |  |  |
|   | 5.3<br>Integrated<br>care team<br>training   | None or minimal training of all staff levels on integrated care approach and incorporation of whole health concepts.            | Some training of all staff levels on integrated care approach and incorporation of whole health concepts.   | Routine training of all staff<br>levels on integrated care<br>approach and incorporation of<br>whole health concepts with role<br>accountabilities defined.  | Systematic annual training for all staff levels with learning materials that targets areas for improvement within the integrated clinic. Job descriptions that include defined responsibilities for integrated BH and general health.  | -> |  |  |
| e = 11  |  |   |   |  |  |    |  |  |

6 Family caregivers are part of team if appropriate to patient care.

#### Integration Continuum **Key Domains of** → Preliminary — Intermediate I – → Intermediate II — → Advanced ——— **Integrated Care** 6.1 Use of Ongoing systematic monitoring Periodic monitoring of identified Limited tracking of state or quality metrics for of population level performance Systematic outcome and GHI quality metrics None or minimal use of health plan quality metrics metrics (balanced mix of PC and quality (e.g., BMI, smoking status, alcohol status, presence of a PCP, medications general health general health quality and some ability to track and BH indicators), ability to respond to improvemetrics (limited use of data, report group level preventive findings using formal improvement program improvement ment (QI) and common chronic disease metrics, anecdotes, case series). care screening rates such as strategies, and implementation primary care indicators) and ability and/or smoking, SUD, obesity or HIV of improvement projects by QI external to regularly review performance team/champion. screening, etc. reporting against benchmarks. 7. Linkages Detailed psychosocial with assessment incorporating 7.1 community/ broad range of SDOH needs Linkages social No or limited/informal Routine SDOH screening, patients linked to social Routine SDOH screening to housing, services that screening of social with formal arrangements and referrals made to social service organizations/ entitlement, improve determinants of health made to social service service agencies, but no resources to help improve other social general (SDOH) and linkages to social agencies, with limited formal arrangements appointment adherence (e.g., health support service agencies, no formal capacity for f/u. services established. childcare, transportation and mitigate arrangements. environtokens), healthy food mental risk sources (e.g., food pantry), factors with f/u to close the loop. 8.1 Build Billing for screening and Fee-for-service billing as well as Receipt of value-based process for No or minimal attempts to bill Sustainability treatment services (e.g., HBA1c, revenue from quality incentives payments (shared savings) billing and for immunizations, screening preventive care, blood pressure related to GHI (e.g., diabetes that reference achievement outcome and treatment, Services monitoring) under fee-for-services of BH and general health reporting to and CV monitoring, tobacco supported primarily by grants with process in place for outcomes. Revenue helps support screening). Able to bill for both or other non-reimbursable sustainability tracking reimbursements for primary care services and support GHI services and ofintegration sources. general health care services. behavioral health services. workforce. efforts 8.2 Build Maintain a dual license (primary Informal primary care No primary care Formalized primary care process for care/behavioral health) for GHI in arrangements that incorporate arrangements, internal or arrangements that offer expanding a shared services setting and the basic array (e.g. appointment external, with telehealth if regulatory general health services regularly assess the need for availability, feedback on engagement, and/or appropriate that incorporate through linkage or administrative or clinical updates report on required blood work) of licensure patient centered home services. partnership. as licensure requirements evolve. desired GHI services. opportunities

#### S2: Key Literature and its Linkage to General Health Integration Framework Domains and Subdomains

| Subdomain  | Bartels<br>(2018) | Bouchery<br>(2018) | Daumit (2019) | Druss (2001, 2010, 2018) | Kilbourne<br>(2008, 2016) | Krupski<br>(2016) | Storholm<br>(2017) | Sweeney<br>(2018) |
|--|-------------------|--------------------|---------------|--------------------------|---------------------------|-------------------|--------------------|-------------------|
| 1.1 Screening and follow-up for preventive and general medical conditions  |                   |                    | х             | х                        | х                         |                   |                    |                   |
| 1.2 Facilitation of referrals and follow-up  |                   | Х                  | Х             | X                        | Х                         | Х                 |                    |                   |
| 2.1 Evidence-based guidelines or treatment protocols for preventive interventions                                |                   |                    | х             | х                        | х                         |                   |                    |                   |
| 2.2 Evidence-based guidelines or treatment protocols for general medical conditions                              |                   |                    | х             | х                        |                           |                   |                    |                   |
| 2.3 Use of targeted medications by BH prescribers for preventive and general medical conditions                  |                   |                    |               |                          |                           |                   | х                  |                   |
| 2.4 Trauma-informed care   |                   |                    |               |                          |                           |                   |                    | Х                 |
| 3.1 Longitudinal clinical monitoring and engagement  | Х                 | Х                  | Х             | X                        | Х                         |                   |                    |                   |
| 4.1 Use of tools to promote patient activation and recovery with adaptations for literacy, language, local norms | х                 | x                  | х             | х                        | x                         |                   |                    |                   |
| 5.1 Care team  |                   | Х                  | Х             | Х                        |                           | Х                 |                    |                   |
| 5.2 Sharing of treatment information   |                   |                    | Х             |                          |                           |                   |                    |                   |
| 5.3 Integrated care team training  |                   | Х                  | Х             | Х                        | Х                         | Х                 |                    |                   |
| 6.1 Use of quality metrics for program improvement   |                   | Х                  |               | Х                        | Х                         | Х                 |                    |                   |
| 7.1 Linkages to housing, entitlement, social support services  |                   |                    |               | X                        |                           |                   |                    |                   |
| 8.1 Build process for billing and outcome reporting to support sustainability of integration efforts             |                   | х                  | х             | х                        |                           | х                 | х                  |                   |
| 8.2 Build process for expanding regulatory and/or licensure opportunities  |                   | х                  | х             | х                        |                           | х                 | х                  |                   |

#### **S4:** General Health Integration Status Survey

General Health Integration Status Survey - Learning Collaborative Project

#### Introduction

This survey assesses Learning Collaborative participants' integration status based on the evidence-based framework for general health integration (GHI), Advancing Integration of General Health in Behavioral Health Settings: A Continuum-Based Framework. The GHI Framework aims to support physical and behavioral health integration in behavioral health settings. This survey collects baseline information on your organization, including characteristics of your clinic, patient demographics, and current care processes and protocols. We will ask you to describe your site's current level of general health integration using the Framework domains and components. In addition, the survey will ask questions about your experience utilizing and interpreting the Framework and its components. Please have the project lead and relevant team members at your practice answer all of these questions using the GHI Framework for reference. Project

# \* 1. Organization Name

2. Facility Name and Address: For organizations with multiple sites, this would be the participating site's name

|  | doesn't have an official name, use a nick<br>reet,"). NOTE: A survey should be comple | name (e.g. a clinic at 123 Tulip St, may be   |

General Health Integration Readiness

This section requires the completion of a self-assessment survey on the key integration components present or already underway. These questions mirror the continuum domains and elements found in the <u>General Health Integration Framework</u>. Please answer for each domain and its corresponding element(s) to indicate your level of integration.

Please note, below is a list of key definitions and explanations to clarify the survey (also found in the legend of the Framework):

- Individuals screening positive must receive follow up by a trained BH provider or PCP (external or co-located). For the purpose of the framework, primary care provider includes M.D., D.O., PA and NP.
- Universal health risk factor screenings include overweight/obesity, tobacco use, alcohol and substance use (including opioid use)
- Targeted general health risk screenings include above and HbA1c, blood pressure, cholesterol, HIV, hepatitis, colonoscopy, mammogram, pap smear, immunizations, flu shots, annual physical assessment

- Common general medical conditions include diabetes, hypertension, hyperlipidemia, coronary artery disease, asthma, arthritis, gastrointestinal disease, tooth and gum disease
- Embedded and co-located arrangements include PCPs available through telehealth services
- Family caregivers are part of team if appropriate to patient care

Domain #1: Screening, Referral to Care and Follow-Up

| * | 22. Please select the statement that best describes your site's screening and follow-up for preventive and   |
|---|--|
| g | general medical conditions at least 70% of the time:   |
|   | Response to patient self-report of general health complaints and/or chronic illness with follow-up only when prompted.   |
|   | Systematic screening for universal general health risk factors and proactive health education to support motivation to address risk factors.   |
|   | Systematic, screening and tracking of universal and relevant targeted general health risk factors as well as routine follow-up for general medical conditions with the availability of in-person or telehealth primary care. |
|   | Analysis of patient population to stratify by severity of medical complexity and/or high cost utilization for proactive assessment tracking within-person or telehealth primary care.  |
|   | 23. Please select the statement that best describes the system your site utilizes for primary care referrals and follow-up at least 70% of the time:   |
|   | Referral to external primary care clinician(s) and no/limited follow-up.   |
|   | Formal collaborative agreement with external primary care practice to facilitate referral that includes engagement and communication expectations between behavioral health and PCP.   |
|   | Referral to onsite, co-located PCP or availability of primary care telehealth appointments with assurance of "warm handoffs" when needed.  |
|   | Enhanced referral facilitation to onsite or closely integrated offsite PCPs, with automated data sharing and accountability for engagement.  |

## Domain #2: Evidence-based care for preventive interventions and common general medical conditions

| * 24. Please select the statement that best describes how evidence-based guidelines or treatment protocol  |
|--|
| for preventative interventions are used in your practice at least 70% of the time?   |
| Not used or minimal guidelines or protocols used for universal general health risk factor screenings care. No/minimal training for BH providers on preventive screening frequency and results.   |
| Routine use of evidence-based guidelines to engage patients on universal general health risk factor screenings with limited training for BH providers on screening frequency and result interpretation.  |
| Routine use of evidence-based guidelines for universal and targeted preventive screenings with use of standard workflows for follow-up on positive results. BH staff routinely trained on screening frequency and result interpretation.   |
| Systematic tracking and reminder system (embedded in EHR) used to assess need for preventive screenings, workflows for follow-up availability of evidence-based and outcomes driven programs to reduce or mitigate general health risk factors   |
| (smoking, alcohol, over weight, etc.).   |
| * 25. Please select the statement that best describes how evidence-based guidelines or treatment protocol  |
| for general medical conditions are used in your practice at least 70% of the time?   |
|  |
| Not used or with minimal guidelines or evidence-based workflows for improving access to care for general medical conditions.   |
| Intermittent use of guidelines and/or evidence-based workflows of general medical conditions with limited monitoring activities. BH staff and providers receive limited training on general medical conditions.  |
| BH providers and/or embedded PCP routine use of evidence-based guidelines or workflows for patients with general medical conditions, including monitoring treatment measures and linkage/navigation to medical services when appropriate. BH staff receives routine training in basics of common general medical conditions. |
| Use clinical decision-support tools (embedded in EHR) with point of service guidance on active clinical management for BH providers and/or embedded PCPs for patients with general medical conditions.   |
| * 26. Please select the statement that best describes the use of targeted medications by behavioral health   |
| prescribers for preventive and general medical conditions at your site at least 70% of the time?   |
| None or very limited use of non-psychiatric medications by BH prescribers. Non-psychiatric medication concerns are primarily referred to PCP(s) to manage.   |
| Behavioral health prescriber routinely prescribes nicotine replacement therapy (NRT) or other psychiatric medications for smoking reduction.   |
| Behavioral health prescriber routinely prescribes smoking cessation as above. May occasionally make minor adjustments to medications for general medical conditions when indicated, keeping PCP informed when doing so.  |
| Behavioral health prescriber can prescribe NRT as well as prescribe general medical medications with assistance and  |

| * 27. Please select the statement that best describes how you support trauma-informed care at your site at least 70% of the time?  |
|--|
| Behavioral health staff have no or minimal awareness of effects of trauma on integrated health care.   |
| Limited staff education on trauma and impact on behavioral health and general health care.   |
| Routine staff education on trauma-informed care model including strategies for managing risk of re-traumatizing. Limited use of validated screening measures for trauma when indicated.  |
| Adoption of trauma-informed care strategies and trauma informed treatment and protocols by BH clinic for staff at all levels to promote resilience and address re-traumatizing and de-escalation procedures. Routine use of validated trauma assessment tools such as ACES and PCL-C when indicated. |

| MONTEFIORE CARE MANAGEMENT   |
| omain #3: Ongoing Care Management  |
|  |
| * 28. Please select the statement that best describes how patients are monitored and engaged for preventive health and/or general medical conditions by your practice at least 70% of the time:  None or minimal follow-up of patients referred to primary and medical specialty care.               |
| Some ability to perform follow-up of general health appointments, encourage medication adherence, and navigation to appointments.  |
| Routine proactive follow-up and tracking of patient medical outcomes and availability of coaching (in person or using technology application) to ensure engagement and early response.   |
| Use of tracking tool (i.e. excel tracker or disease registry software) to monitor treatment response and outcomes over time at individual and group level, coaching and proactive follow-up with appointment reminders.  |
|  |

Domain #4: Self-Management Support that is Culturally Adapted

| with adaptations for literacy, economic status, language, and cultural norms at least 70% of the time?  |
|---|
| None or minimal patient education on basic general medical conditions and universal general health risk factor screening recommendations.   |
| Some availability of patient education on basic general health risk factor screening recommendations, including materials/handouts/web-based resources, with limited focus on self-management goal-setting.   |
| Routine brief patient education delivered in person or technology application, on universal and targeted preventive screening recommendations and general medical conditions. Treatment plans include diet and exercise, with routine use of self-management goal-setting.  |
| Routine patient education with practical strategies for patient activation and healthy lifestyle habits (exercise and healthy eating) delivered using group education, peer support and/or onsite or community-based exercise programs. Self-management goals outlined in treatment plans. Advance Directives discussed and documented when appropriate.  |

Behavioral health provider(s), patient, nurse, family caregiver (if appropriate).  Behavioral health provider(s), patient, nurse, peer, co-located primary care clinician(s) (M.D., D.O., PA, NP), family caregiver (if appropriate).  Behavioral health provider(s), patient, nurse, peer, primary care clinician(s), care manager focused on general health integration, family caregiver (if appropriate).  * 31. Please select the statement that best describes how the team shares treatment information, case  |
| * 30. Please select the description of a "care team" that best aligns with your practice at least 70% of the time:  Behavioral health provider(s), patient, family caregiver (if appropriate).  Behavioral health provider(s), patient, nurse, family caregiver (if appropriate).  Behavioral health provider(s), patient, nurse, peer, co-located primary care clinician(s) (M.D., D.O., PA, NP), family caregiver (if appropriate).  Behavioral health provider(s), patient, nurse, peer, primary care clinician(s), care manager focused on general health integration, family caregiver (if appropriate).  * 31. Please select the statement that best describes how the team shares treatment information, case reviews, care plans and feedback at least 70% of the time?   |
| * 30. Please select the description of a "care team" that best aligns with your practice at least 70% of the time:  Behavioral health provider(s), patient, family caregiver (if appropriate).  Behavioral health provider(s), patient, nurse, family caregiver (if appropriate).  Behavioral health provider(s), patient, nurse, peer, co-located primary care clinician(s) (M.D., D.O., PA, NP), family caregiver (if appropriate).  Behavioral health provider(s), patient, nurse, peer, primary care clinician(s), care manager focused on general health integration, family caregiver (if appropriate).  * 31. Please select the statement that best describes how the team shares treatment information, case reviews, care plans and feedback at least 70% of the time?  No or minimal sharing of treatment information and feedback between behavioral health and external PCP.  Exchange of information (phone, fax) and routine consult retrieval from external PCP on changes of general health status, |

care plans supported by an organizational culture of open communication channels.

| * 32. Please select the statement that best describes how integrated care training is provided to the team?  |
|--|
| None or minimal training of all staff levels on integrated care approach and incorporation of whole health concepts.   |
| Some training of all staff levels on integrated care approach and incorporation of whole health concepts.  |
| Routine training of all staff levels on integrated care approach and incorporation of whole health concepts with role accountabilities defined.  |
| Systematic annual training for all staff levels with learning materials that targets areas for improvement within the integrated clinic. Job descriptions that include defined responsibilities for integrated behavioral health and physical health care. |

Domain #6: Systemic Quality Improvement

\* 33. Please select the statement that best describes the use of quality metrics for physical health program improvement and/or external reporting:

None or minimal use of general health quality metrics (limited use of data, anecdotes, case series).

Limited tracking of state or health plan quality metrics, and some ability to track and report group level preventive care screening rates such as smoking, SUD, obesity or HIV screening, etc.

Periodic monitoring of identified outcome and quality general health integration metrics (e.g., BMI, smoking status, alcohol status, access to annual physical exams, medications, and common chronic disease metrics, primary care indicators) and ability to regularly review performance against benchmarks.

Ongoing systematic monitoring of population-level performance metrics (balanced mix of PC and behavioral health indicators), ability to respond to findings using formal improvement strategies, and implementation of improvement projects by quality improvement team/champion.

General Health Integration Status Survey - Learning Collaborative Project

Domain #7: Linkages with Community and Social Services that Improve General Health

| * ' | 34. Please select the statement that best describes your referrals to housing, entitlement, and other social  |
|-----|---|
| sι  | upport services made at least 70% of the time?  |
|     | No or limited/informal social determinants of health (SDOH) screening and linkages to social service agencies, no formal arrangements.  |
|     | Routine screening of SDOH and referrals made to social service agencies, but no formal arrangements established.  |
|     | Routine screening of SDOH, with formal arrangements made to social service agencies, with limited capacity for follow-up.   |
|     | Detailed psychosocial assessment incorporating broad range of SDOH needs, patients linked to social service organizations/resources to help improve appointment adherence (e.g. transportation tokens, childcare), healthy food sources (e.g. food pantry), with follow-up to close the loop. |
|     |   |

Domain #8: Sustainability

| * 35. Please select the statement that best describes your process for billing and outcome reporting to suppor sustainability of integration efforts at least 70% of the time?  |
|---|
| No or minimal attempts to bill for immunizations, screening and treatment. Services supported primarily by grants or other non-reimbursable sources.  |
| Billing for screening and treatment services (e.g., preventative care, HBA1c, blood pressure monitoring) under fee-for-services, with process in place for tracking reimbursements for general health care services.      |
| Fee-for-service billing as well as revenue from quality incentives related to GHI (e.g. diabetes and CV monitoring, tobacco screening, etc.). Able to bill for both primary care services and behavioral health services. |
| Receipt of value-based payments (shared savings) that reference achievement of behavioral health and general health outcomes; revenue helps support general health integration services and workforce.                    |
| * 36. Please select the statement that best describes your process expanding regulatory and/or licensure  |
| opportunities for physical health integration?  |
| No primary care arrangements that offer physical health services through linkage or partnership.  |
| Informal primary care arrangements that incorporate the basic array (appointment availability, feedback on engagement, report on required blood work) of desired general health integration services.                     |
| Formalized primary care arrangements, internal or external, with telehealth if appropriate that incorporate patient centered home services.   |
| Maintain a dual license (primary care/behavioral health) for GHI in a shared services setting and regularly assess the need for administrative or clinical updates as licensure requirements evolve.                      |

#### Section 3: Framework Experience

Please provide feedback on your integration team's experience using the framework during the course of completing the survey. We will use your feedback to further improve on its clarity and ease of use for behavioral health clinics advancing physical health care.

\* 37. Please describe your experience using the Framework from 1 (least favorable) to 5 (most favorable) on the following dimensions.

|   | Unfavorable | Somewhat<br>Unfavorable | Indifferent | Somewhat<br>Favorable | Most Favorable |
|---|-------------|-------------------------|-------------|-----------------------|----------------|
| Ease of use of the<br>Framework to describe<br>your current general<br>health integration state |             |                         |             |                       |                |
| Ease of understanding the elements of the Framework within a continuum structure                |             |                         |             |                       |                |
| Ease of using the framework for planning to advance your general health integration             |             |                         |             |                       |                |

| 38. | What changes or additions would you like to see to improve the clarity or utility of the Framework?  |    |
|-----|--|----|

#### S5: Variation in the state of GHI among participating clinics

#### SUBDOMAINS WITH THE MAJORITY OF RESPONSES (>50%) IN THE PRELIMINARY OR INTERMEDIATE I PHASE OF INTEGRATION

Screening, referral to care and follow-ups

Evidence-based care for preventive interventions and common general medical conditions

Medication management

Ongoing care management

Multidisciplinary care team

Infromation sharing

Integrated care training

Sustainability (billing and regulatory)

# OF RESPONSES (>50%) IN THE INTERMEDIATE II OR ADVANCED PHASE OF INTEGRATION

Trauma-informed care

Self-management supports

Quality improvement

Social service linkages
