

Figure S1. Predicted probabilities of past-year mental health treatment by need definition, after adjustment for overall health, age, sex, marital status, income, education level, insurance status, county type, and employment status.

Table S1. Odds of endorsement of treatment barrier by Asians with unmet perceived need, after adjustment for overall health, age, sex, marital status, income, education level, insurance status, county type, and employment status.

Reasons for unmet need (overall)	Odds ratio	95% CI	P-value
Affordability			
Couldn't afford cost	0.634	0.428-0.940	0.024
Insurance didn't cover all mental health treatment	1.578	0.992-2.512	0.054
Insurance didn't pay enough for mental health treatment	1.140	0.706-1.838	0.59
Treatment access			
No transportation/inconvenient	1.393	0.754-2.572	0.286
Didn't know where to go	1.613	1.091-2.385	0.017
Stigma			
Concerned neighbors or community would have negative opinion	1.260	0.836-1.901	0.267
Didn't want others to find out needed treatment	1.139	0.703-1.846	0.594
Concerned about negative effect on job	1.103	0.665-1.830	0.702
Treatment not a priority			
Didn't think needed treatment	1.349	0.839-2.170	0.214
Thought could handle problem without treatment	1.007	0.746-1.359	0.964
Didn't think treatment would help	0.977	0.570-1.673	0.931
Didn't have time	0.821	0.505-1.331	0.419

Fear			
Concerned about confidentiality	1.505	0.890-2.544	0.126
Concerned about being committed or having to take medicine	0.807	0.521-1.249	0.332
Other			

Data: 2012-2016 National Survey on Drug Use and Health
