Table 2

Factors associated with six-month return to emergency services,
Baltimore City residents (N=406)

	Adjusted <i>(Pseudo R²</i> <i>= 0.17)</i>	CI
First age quintile (referent – 1 st)	.99	.46 – 2.09
Third age quintile (referent – 1 st)	1.15	.47 – 2.79
Fourth age quintile (referent – 1 st)	.54	.21 – 1.40
Fifth age quintile (referent – 1 st)	.74	.30 – 1.81
African American	2.88	1.19 – 6.91
Medical Assistance	1.74	.30 – 1.81
DSS Involvement	1.75	.98 – 3.34
In current treatment	2.45	1.19 – 5.03
History of hospitalization	2.70	1.41 – 5.17
Hospitalized at visit	1.23	.48 – 3.14
More than 2 diagnoses	2.09	1.11 – 3.92
Suicidal thoughts/behavior	1.92	.99 – 3.73
Disruptive Behavior	2.32	.95 – 5.69
Inpatient disposition x Disruptive Behavior	.28	.09 - .92

Note: The adjusted model includes age and insurance status as covariates; these variables were dropped from the unadjusted model, due to statistical non-significance.
